Half of unit turns take nine days or more.

The benchmark is three to seven.

The extra days are mostly not ~~work~~.

The missing days have no *name.*

No report has a field for “days spent not knowing the painter was done.” It all becomes “turnover took 11 days.”

LEAK 1

Finished, and nobody said so.

The unit is ready and empty at the same time. Nothing arrives to tell you which.

LEAK 2

Waiting on a confirmation.

The next vendor has been asked. Nobody has said yes. One operator put this at two to three days per turn.

LEAK 3

The second visit.

Clean before the repairs are finished and you clean again. 20 to 25% of turnover repairs need a second visit.

LEAK 4

The scramble.

Recovering lost days means expediting work. That runs 30 to 50% above scheduled rates.

LEAK 5

The phone tag.

10 to 15 hours a week chasing status by phone. That one lands as salary, not as ~~vacancy~~.

Count yours.

Take your last ten turns. Split each one into days worked and days waited.

120 turns a year. Four wasted days on each.

About $24,000.

That is arithmetic, not a ~~benchmark~~. Run yours.
